

# Epifanes Clear High Gloss Varnish and Wood Finish Gloss

## Epifanes Clear High Gloss Varnish

Epifanes, the best marine finish money can buy, is favored by restorers and boat builders the world over for its mirror like finish, super fast build, and the longest life of any varnish on the market. Manufactured with tung oil, more ultraviolet filter than other varnishes, and urethane resins for superior exterior protection, it is simply the best finish available for your wooden boat. It provides a tough high-gloss finish. Contains no extra thinners - you thin it yourself for greater control. Thin the first coat 50%, the second coat 25%, the third coat 15%, and additional coats anywhere from 0 to 7%. [If you used sealer, thin your first coat 25%.] Do not thin your last one or two coats. Apply 12 to 14 coats for base coats, then every year or two, add two coats to maintain your ultraviolet protection, as this protectant is used up by exposure to the sun. You need at least 12 coats to get good u.v. protection. If you try to get by with fewer coats, you may have lifting and flaking after one summer in the sun.

**EPVAR1** Epifanes Clear High Gloss Varnish liter \$43  
**EPVAR6** Epifanes Varnish 6 liter case price \$246  
**[Save \$2 a can, only \$40 per liter]**

## Epifanes Varnish and Wood Finish Gloss Accelerator

Epifanes Accelerator speeds the curing process of brush applied varnish and wood finish gloss without affecting gloss, longevity, or flowing capabilities. Although it does not allow you to shorten the time between coats, it speeds the curing process so the danger of dust wrecking your finish is greatly reduced. For cold or humid conditions, or any conditions, indoor or out, where dust is present. A little accelerator goes a long way. Add 5 to 7% accelerator to your varnish or wood finish gloss. [One liter will treat 3 cases of varnish or wood finish gloss.]

**EPACC** Epifanes Varnish Accelerator liter \$43

## Epifanes Easy-Flow (replaces Epifanes Stunt Oil)

Easy-Flow slows the curing time of Epifanes Varnish and Wood Finish Gloss, along with other single part and half synthetic paints and varnishes. Add between 5% and 10% when you are varnishing large surfaces and desire a longer wet edge time.

**EPFLOW** Epifanes Easy-Flow liter \$31

**We encourage you to compare our Epifanes prices with other retailers. Buy from us and save up to 40% off retail.**

## Epifanes Wood Finish Gloss

Epifanes Wood Finish Gloss is very similar in every way except one to Epifanes Clear High Gloss Varnish, it can be recoated within 72 hours without sanding. You only need to sand for appearance, not adhesion. It can save you an incredible amount of time and work. Follow the same instructions for thinning as for the regular varnish on the left. Unlike varnishes, Epifanes Wood Finish Gloss also works as a finish on teak. Although we have only carried this product for a few years, it already has developed such a following that it out sells the High Gloss Varnish. Next time you refinish your boat, give it a try and see what others have already discovered. We think you will agree that Epifanes Wood Finish Gloss will provide you with a superior finish with a lot less work.

## Epifanes Spraying Thinner

Epifanes S.B.P. [Special Boiling Point] thinner for spray applications. Works with both Epifanes Clear High Gloss Varnish, Wood Finish Gloss, and Epifanes Yacht Enamel. Thin as needed up to 15% with wood finish gloss and up to 20% with varnish.

**EPSPBP** Epifanes S.B.P. [spraying] Thinner liter \$18

## Natural Bristle Varnish Brushes

Regardless of advances in the quality of artificial bristle brushes, none come close to the quality of these natural bristle brushes.

Once used, your brush should never be allowed to dry. Suspend it in mineral spirits or diesel fuel, being careful that the bristles do not touch the bottom of the container. Make sure the container is covered.

Do not use your brush for painting, you will never get it clean enough again for varnishing.
